"Merry Christmas," said Foley. "The place is yours. Just as long as you don't leave the building." Mary's room was 704, and the nicest thing about it — even nicer than the crisp, polka-dotter curtains, or the view of the river—was the fact that it had been paid for in advance.

Mrs. Cranshaw? Mrs. Cranshaw, the nurse-in-charge told Alden, was still in the labor room, and doing as well as might be expected, because it wasn't wise, after all, to hasten Nature. Well, was it? And Alden replied, in his own, stupid way, that he didn't know. "How about Dr. Farnley?"

Warfarin Means Death for Rats, Mice

shown with an assistant at the University of Wisconsin. Rat in inset has died painlessly from internal hemorrhage after consuming warfarin bait.

With inventors presumably still working on ideas for a really better mousetrap, a University of Wisconsin scientist, Prof. Karl Paul Link, has beat them to the punch with a substance that promises to make traps—and the old types of poison—obsolete.

The new substance—warfarin

is the deadly ingredient in rat killers now on the market under various trade names. Unlike many rat poisons, warfarin is not "for professionals only." Anyone can use it, safely and effectively.

Nationwide tests by agencies such as the U. S. Fish and Wildlife Service and the U.S. Public Health Service have demonstrated its out-standing effectiveness. Now it has been selected for use in many statewide rodent extermination

campaigns.
Poisoned rodents show no immediate symptoms and develop no "bait shyness" with warfarin. That is one of its major advannally die painlessly of internal hemorrhage. Since warfarin, to be effective,

must be consumed in small quantities over a period of days, there is little chance that children, pets,

or domestic animals will get enough to cause ill effects.

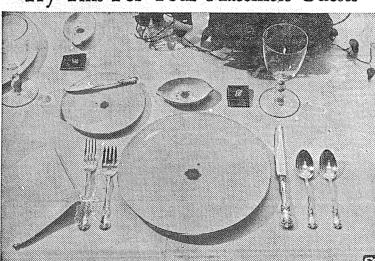

Warfarin will bring a rat popu-lation under control, then prevent reinvasion of a given area thereafter by killing newcomers as they

arrive.

Before its release to commercial manufacturers and consumers, warfarin was given several hundred field trials in every state in the nation, in Canada, Hawaii, and other foreign countries. The tests were conducted by the United States Fish and Wildlife Service and the Public Health Service.

"Many reports showed complete elimination of rats and mice where all other poisons tried had failed," That is one of its major advantages. The rats and mice continue to eat and gradually become sleepy, walk more slowly, and fithe Foundation reported. Warfar-

Try This For Your Matchless Guests

It isn't the "splurge"—it's the thoughtful little things a hostess remembers to do which make guests remember her with favor. And the beautiful part is that many of these little things cost so little!

In these days an average of at least six out of ten women smoke occasionally. So the thoughtful hostess sees to it that her living room is provided with a generous supply of ashtrays—and enough matches so that a

lone book does not have to be passed from hand to hand.
At luncheon, canasta, and dinner parties, the good hostess also sets the table with an individual ashtray and a match book for each of her guests. Many women now buy cartons of book matches with the family name, initials, or crest, or with the name of their farm, boat, week-end place, or club. In these days of inflation, matches are still bargains in thoughtful hospitality.
